

WEEK 2 PROJECT REPORT: REACT UI COMPONENT LIBRARY

Internship: YuvaIntern – Web Development

Submitted By: Kaushal Kumar

Registration No.: 24030485005

Institution: BIT Sindri, Jharkhand

Department: B.Tech Information Technology (2nd Year)

Date: June 13, 2026

1. Project Overview

This project was developed as part of Week 2 of the YuvaIntern Web Development Internship. The objective was to design and implement a reusable UI Component Library using ReactJS.

The library contains five reusable components:

- Button Component
- Input Component
- Card Component
- Form Component
- Modal Component

The project focuses on component reusability, accessibility, responsive design, and maintainable code structure.

2. Technologies Used

The following technologies and tools were used during development:

- ReactJS
 - Vite
 - JavaScript (ES6+)
 - CSS Modules
 - PropTypes
 - HTML5
 - Responsive CSS Techniques
-

3. Components Delivered

3.1 Button Component

The Button component provides reusable action controls across the application.

Features

- Primary Variant
- Secondary Variant
- Danger Variant
- Disabled State
- Multiple Size Support
- Loading State Support
- Keyboard Accessible

Figure 1: Button Component Showcase

3.2 Input Component

The Input component enables reusable and accessible form input handling.

Features

- Label Support
- Placeholder Support
- Character Counter
- Validation Ready
- Password Visibility Toggle
- Clearable Input Support

Figure 2: Input Component Showcase

2. Inputs

Email Address *

example@test.com 0/50

Validate Email

Props: `variant` , `size` , `icon` , `clearable` ,
`showPasswordToggle`

3.3 Card Component

The Card component is used to display grouped information in a clean and reusable layout.

Features

- Image Support
- Hover Effects

- Clickable Card Support
- Responsive Layout
- Accessibility Labels

Figure 3: Card Component Showcase

3.4 Form Component

The Form component demonstrates structured form creation using reusable input elements.

Features

- Input Validation
 - Structured Layout
 - Consistent Styling
 - Reusable Form Fields
-

3.5 Modal Component

The Modal component provides an accessible popup dialog for user interactions.

Features

- Open/Close Functionality
- Keyboard Accessible
- Overlay Background
- Custom Content Support
- Footer Action Buttons

Figure 4: Form Component & Modal Showcase

Figure 5: Modal Open State

The image shows a modal dialog box with a white background and a dark border. At the top, the title "Account Sign In" is displayed in a bold, dark font. Below the title, there is a light gray rounded rectangle containing two input fields. The first input field is labeled "Username / Roll No *" in a dark font, with a red asterisk indicating a required field. The placeholder text "Enter your username" is visible inside the field. The second input field is labeled "Password *" in a dark font, also with a red asterisk. The placeholder text "Enter your password" is visible inside the field. To the right of the password field, there is a small purple eye icon. At the bottom right of the modal, there are two buttons: a gray "Cancel" button and a blue "Sign In" button with white text.

4. Responsive Design Testing

The application was tested using responsive browser tools to verify usability across different screen sizes.

- I. Desktop view
- II. Tablet view
- III. Mobile view

Desktop View

5. Accessibility Features

The project incorporates several accessibility-focused practices:

- Semantic HTML Elements
- Keyboard Navigation Support
- Focus Indicators
- Form Labels
- Alternative Image Text
- ARIA Attributes for Interactive Components

These practices help improve usability and accessibility for a wider range of users.

6. Repository & Deliverables

Repository URL

<https://github.com/kaushalvivek2005/react-project/tree/main/week2-ui>

Submitted Deliverables

- Complete React Source Code
 - Reusable UI Components
 - CSS Module Styling
 - Documentation Report
 - GitHub Repository
-

7. Conclusion

The Week 2 assignment successfully demonstrates the development of a reusable React UI Component Library. The project implements five core UI components with a focus on reusability, responsive design, accessibility, and maintainable code organization. This component library can serve as a foundation for future React application development.
